 DNA-PHONA-PNA chimeric molecules: contributions to
 binding against complementary DNA
 Peyman, A.; Uhlmann, E.; Wagner, K.; Augustin, S.;

AB The synthesis of a DNA-phosphonate peptide nucleic acid analog
 (PHONA)-peptide nucleic acid (PNA) chimeric mol. using a monomethoxytrityl
 (Mmt) protection strategy is described. The chimeric oligomer shows
 duplex binding properties that are comparable to the corresponding PNA.
 Thus, PHONA building blocks can be incorporated into PNAs without
 distortion of the PNA structure.
